Amendments to the Abstract

Please amend the title and the following paragraph that appear on page 23 of the

specification as follows such that the underlined portion below is added, and the paragraph is

amended as shown below:

METHODS AND SYSTEMS FOR DYNAMICALLY CONFIGURING A NETWORK

COMPONENT TO REROUTE MEDIA STREAMS

A method for dynamically configuring a network component to reroute media streams is

disclosed. The method includes receiving a request for content from a first network connected

component and determining a type of media service needed for at least a portion of the content.

Moreover, the method includes configuring a network data relaying component to forward at

least a portion of the content from a second network connected component to a third network

3

connected component.
